Prime Minister, Head of Government

Gabriel MBAIROBE

Minister of Agriculture and Rural Development

FOREWORD

The Ministry of Agriculture and Rural Development is pleased to present the eighteenth edition of the Statistical Yearbook of Agriculture, for the year 2022 (AGRISTAT No. 18).

This new edition, the 18th of its kind, comes in a context marked, on the one hand, by the recent adoption of the National Development Strategy 2020-2030 (NDS30), which is Cameroon's new reference framework for its development action during the current 2020-2030 decade, and specifically at the sectoral level through the implementation of the Rural Sector Development Strategy and, on the other hand, by the application of Law No. 2020/010 of 20 July 2020 to regulate statistical activity in Cameroon.

AGRISTAT is a collection of information produced by the Ministry of Agriculture and Rural Development (MINADER), the institution in charge of developing, implementing and evaluating government policy in the areas of agriculture and rural development. This tool provides information on trends in agricultural production, trends in cultivated surface areas, price fluctuations, use of inputs, and the volume of imports and exports of agricultural products.

This edition of the statistical yearbook of agriculture results from cooperation between the Ministry of Agriculture and Rural Development (MINADER) and the National Institute of Statistics (NIS), under the Global Plan for Public Finance Management Reform 2019-2021, led by the Budget Reform Division of the Ministry of Finance. The National Statistical System through the NIS was allocated a budget for the year 2021 to support certain ministries, including the Ministry of Agriculture and Rural Development, in the design of their statistical yearbooks.

This publication is the result of a consultative process, involving both the central and devolved bodies of the Ministry of Agriculture and Rural Development, and external opinions from users and producers of statistical data with new relevant needs. The themes addressed have been updated to take into account the needs of the various users and producers of data from the agriculture and rural development sub-sector, both at national and international level.

AGRISTAT is produced on an annual or multi-annual basis, depending on the size of the series discussed and availability of resources, for planning and monitoring the development of the agricultural sector. It is therefore a critical decision-making tool for interventions aimed at promoting the development of agriculture and the rural sector in Cameroon.

This statistical yearbook comes almost ten years after the latest publication. The break in its production was due to preparation, by stakeholders in the rural sector statistical production, of the General Census of Agriculture and Livestock in order to have a sampling frame making it possible to conduct statistical surveys on the one hand, and to have quality statistical data, on the other hand. This yearbook, which arises as an information tool on trends in the agricultural sub-sector over the period 2016-2020, is also an instrument for analysing trends in the performance of agriculture over this period, as well as a referential base for the identification of future actions aimed at the development of agriculture and the rural sector in general.

I would be remiss to end this foreword without extending my appreciation to all those who were, directly or indirectly, involved in the preparation of this precious document.

I wish every reader of AGRISTAT No. 18 a fruitful reading for the achievement of the objectives assigned to the agriculture and rural development sub-sector in the NDS30, as desired by the Head of State, His Excellency Paul BIYA.

CONTENTS

FOREWORD	IV
ACRONYMS AND ABBREVIATIONS	III
CONVENTIONAL SIGNS	V
LIST OF TABLES	VI
LIST OF FIGURES.....	XI
LIST OF MAPS.....	XII
CHAPTER 1: REMINDER OF THE MISSIONS OF THE MINISTRY OF AGRICULTURE AND RURAL DEVELOPMENT, PRESENTATION OF THE YEARBOOK AND METHODOLOGY	1
1. REMINDER OF THE MISSIONS OF THE MINISTRY OF AGRICULTURE AND RURAL DEVELOPMENT.....	2
2. PRESENTATION OF THE YEARBOOK AND METHODOLOGY	3
2.1. <i>Presentation of the yearbook</i>	3
2.2. <i>Summary of methodology.....</i>	3
3. FOCUS ON SOME PERFORMANCE INDICATORS	8
CHAPTER 2: PRODUCTION AND PRODUCTIVITY OF AGRICULTURAL SECTORS	9
1. FOCUS ON THE MAIN PERFORMANCE INDICATOR OF THE CHAPTER	10
2. PRODUCTION AND PRODUCTIVITY OF CEREALS	10
2.1. <i>Production of cereals</i>	11
2.2. <i>Cereal productivity.....</i>	12
3. PRODUCTION AND PRODUCTIVITY OF ROOTS AND TUBERS, FRUITS AND DERIVED PRODUCTS	14
3.1. <i>Production of roots and tubers and fruits.....</i>	14
3.2. <i>Productivity of roots and tubers, and fruits</i>	19
4. PRODUCTION AND PRODUCTIVITY OF INDUSTRIAL SECTORS.....	23
4.1. <i>Production of industrial and export products</i>	24
4.2. <i>Productivity of industrial and export products.....</i>	28
4.3. <i>Production of main export/import crops (enterprises) (tons).....</i>	31
5. PRODUCTION AND PRODUCTIVITY OF OTHER SECTORS	33
5.1. <i>Production of other sectors.....</i>	33
5.2. <i>Productivity of other sectors</i>	39
6. TECHNICAL CAPACITY STRUCTURING AND BUILDING	43
6.1. <i>Situation of producer organisations</i>	43
6.2. <i>Training under the training system of the Ministry of Agriculture and Rural Development.....</i>	44
7. QUALITY CONTROL OF AGRICULTURAL PRODUCTS AND SUPPORT FOR AGRICULTURAL INPUTS.....	48
7.1. <i>Quality control of agricultural products.....</i>	48
7.2. <i>Agricultural input support.....</i>	49
7.3. <i>Medium-sized and large farms</i>	58
CHAPTER 3: INFRASTRUCTURAL ENVIRONMENT AND ACCESS TO FACTORS OF PRODUCTION AND MARKETS	59
1. FOCUS ON THE MAIN INDICATORS OF THE CHAPTER.....	60
2. AGRICULTURAL EQUIPMENT AND MATERIALS.....	61
3. SOCIO-ECONOMIC AND COMMUNITY INFRASTRUCTURE IN RURAL AREAS	62
4. IRRIGATION SCHEMES	63
5. SURFACE AREAS OF DEVELOPED AGRICULTURAL LAND.....	63

5.1. <i>Surface areas of cereals</i>	64
5.2. <i>Surface areas of roots and tubers, and fruits.....</i>	65
5.3. <i>Surface areas of industrial and export sectors and niche products</i>	68
5.4. <i>Surface areas of other sectors</i>	71
CHAPTER 4: RESILIENCE OF AGRICULTURAL PRODUCTION, FOOD AND NUTRITIONAL SECURITY SYSTEMS OF RURAL POPULATIONS IN THE FACE OF CLIMATE CHANGE.....	76
1. STRENGTHENING AND SCALING UP CLIMATE CHANGE ADAPTATION AND MITIGATION MEASURES	77
2. STRENGTHENING THE FOOD AND NUTRITIONAL SECURITY OF VULNERABLE POPULATIONS.....	85
2.1. <i>Prevalence of food insecurity.....</i>	85
2.2. <i>Estimated populations by phase of food insecurity in each region analysed 2017.....</i>	88
2.3. <i>Estimated populations by phase of food insecurity in each region analysed 2018.....</i>	89
2.4. <i>Estimated populations by phase of food insecurity in each region analysed 2019.....</i>	90
2.5. <i>Main results for areas affected by food and nutrition insecurity 2019.....</i>	92
2.6. <i>Main results for areas affected by food and nutrition insecurity in 2020.....</i>	94
3. ACCESSIBILITY TO AGRICULTURAL PRODUCTS	95
4. RESTORING AND SECURING LAND RESOURCES	103
CHAPTER 5: CONTRIBUTION OF AGRICULTURE TO THE NATIONAL ECONOMY.....	105
1. CONTRIBUTION OF THE AGRICULTURE SUB-SECTOR TO THE ECONOMY.....	106
2. TRADE OF AGRICULTURE SUB-SECTOR PRODUCTS	107
3. FINANCING OF THE SUB-SECTOR	109
APPENDICES.....	110

CONVENTIONAL SIGNS

Conventional signs are signs adopted by mutual agreement to illustrate certain facts. According to the LAROUSSE dictionary, these signs are a “rule of conduct adopted within a group” and are “in principle compulsory for those who adhere to it”. With regard to this statistical yearbook, the following signs will be used:

- Strictly zero result (This sign is used when a value has been rounded to zero);
- ... *Result not available;*
- /// *Sum not justified*
- e *Estimate and evaluation;*
- p *Provisional (This sign is used to indicate that a datum is provisional. Provisional data are subject to revision);*
- r *Data corrected with respect to the previous edition (This sign is used when a datum is revised).*

CHAPTER 1: REMINDER OF THE MISSIONS OF THE MINISTRY OF AGRICULTURE AND RURAL DEVELOPMENT, PRESENTATION OF THE YEARBOOK AND METHODOLOGY

1. REMINDER OF THE MISSIONS OF THE MINISTRY OF AGRICULTURE AND RURAL DEVELOPMENT

The Ministry of Agriculture and Rural Development is responsible for the development, implementation and evaluation of government policy in the areas of agriculture and rural development.

In this capacity, the Ministry is responsible for:

a) in the area of agriculture:

- the development, planning and implementation of government programmes relating to agriculture and rural development;
- the development of regulations and standards, as well as the control of their application;
- the monitoring and protection of the various agricultural sectors;
- the phytosanitary protection of plants;
- the design of strategies and terms and conditions for the guarantee of food security and self-sufficiency as well as the monitoring of their implementation;
- the identification and promotion of new agricultural productions for export;
- the collection, production and analysis of agricultural statistics;
- the dissemination of agricultural information and advice to producers;
- the coordination of the management of crisis situations in the area of agriculture;
- the monitoring of vocational agricultural organisations;
- the promotion of investments, medium and large holdings in the agricultural sector;
- agricultural and cooperative teaching and control of agricultural and cooperative teaching, as well as of private agricultural education, in conjunction with the Ministry responsible for vocational training.

b) in the area of rural development:

- the supervision of farmers and agricultural extension;
- participation in the planning of programmes to enhance the living environment in rural areas, in conjunction with the competent Ministries;
- the monitoring of the implementation of programmes to enhance the living environment in rural areas;
- the promotion of community development;
- rural engineering.

2. PRESENTATION OF THE YEARBOOK AND METHODOLOGY

2.1. PRESENTATION OF THE YEARBOOK

The statistical yearbook of agriculture (AGRISTAT) is a publication which reports on the most important retrospective statistical series for all agricultural activities and those of the rural world.

It makes up the statistical memories of the Ministry of Agriculture and Rural Development, gives a picture of a situation and provides information on trends in agricultural production and its environment over several years. It is used to compare and analyse situations and is a critical tool for fact-based decision-making.

In its agricultural statistics production activities in Cameroon, the Ministry of Agriculture and Rural Development (MINADER), through the Department of Agriculture Surveys and Statistics (DESA), has just published this new collection of agricultural statistical data.

It is divided into five (05) chapters which respectively provide information on:

- the reminder of the missions of the Ministry of Agriculture and Rural Development, presentation of the yearbook and its methodology;
- the production and productivity of the agricultural sectors;
- the infrastructural environment, and access to production factors and markets;
- the resilience of agricultural production systems and the food and nutritional security of rural populations in the face of climate change;
- the contribution of agriculture to the national economy.

2.2. SUMMARY OF METHODOLOGY

Production of this statistical yearbook included the following five (05) stages, namely: (i) development of the model and data collection tools; (ii) data collection; (iii) operation and processing of the data collected; (iv) drafting; (v) editing and dissemination.

2.2.1. Some concepts and definitions

Agriculture: economic activity aimed at transforming and enhancing the natural environment, in order to obtain plant (and animal, in the broad sense) products useful to humans, in particular those intended for human consumption.

Agricultural campaign: period corresponding to the succession of work required for plant or animal production. Activities carried out by the household correspond to twelve (12) months.

Agro-industry: industrial enterprise with an agro-pastoral vocation.

Atomiser: low-capacity bottle or professional device which allows for the projection of fine droplets of water, for example mixed.

Chemical fertiliser: fertiliser made from inorganic materials by means of an industrial process. Manufacturing involves mechanical enrichment, simple crushing, or more elaborate chemical transformation of one or more raw materials.

Cultivated surface area: physical surface area occupied by crops during an agricultural campaign.

Data processing: operation which consists in clearing data from both statistical and non-statistical sources in order to organise them in such a way as to have a clean file.

Fertiliser: any substance or material containing one or more recognised plant nutrients and used as such for the purpose of promoting the knowledge and production of plants. (See Law No. 2003/007 of 10 July 2003 to regulate the activities of the fertiliser sub-sector in Cameroon).

Food crops: crops grown generally for household consumption. Grown on a large scale, they also serve as raw material for industries.

Food security: situation in which all individuals have physical and economic access to sufficient, safe and nutritious food to meet their energy needs.

Fungicides: substances that destroy fungi or inhibit their growth.

Garden crops : crops grown in the off-season or throughout the year with inputs of water and manures that must be checked daily by humans, regardless of the place of cultivation.

Harvested surface area: area from which a crop is harvested.

Herbicides: products used to destroy plants, or to inhibit their growth.

Huller: machinery used to separate shells/pulps from seeds.

Industrial crops: crops grown on a large scale, generally intended for agro-industry or for export.

Insecticides: substances used to kill or repel insects.

Irrigation: deliberate addition of water to the land to improve crop production. Irrigation involves the presence of infrastructure and machinery, such as irrigation canals or ditches, pumps, or localised irrigation systems to bring water to crops. Manual watering of plants with buckets, watering cans or other devices is part of irrigation systems. In contrast, the accidental flooding of land by the rising of rivers is not considered as irrigation.

Learner: person who follows any teaching.

Local Measurement Unit (LMU): instrument for measuring agricultural products used in a locality.

Motor pump: a device designed to move a liquid and driven by a motor. This machine can be equipped with a simple carrying handle and small wheels for the lighter ones or possibly hitched and towed by a motor vehicle for heavier and bulkier models. It is therefore a particular model of motor pump unit.

Official statistics: statistical data produced by services under the National Statistical Information System.

Organic fertiliser: fertiliser from processed plant or animal materials or unprocessed mineral materials (lime, rock or phosphate, for example) containing at least 5% combined nutrients. Organic fertilisers include organic materials of animal origin, such as guano, bone meal, fish meal, leather meal and blood. Other organic materials such as manure, slurry, compost or sewage sludge are also organic fertilisers.

Pesticides: (sometimes referred to as "agricultural chemicals") are substances intended to repel, destroy or control pests and undesirable species of plants or animals or to control the behaviour or physiology of pests or crops during production or storage. (See World Agricultural Census Programme 2020 Volume 1 Food and Agriculture Organization of the United Nations Rome, 2016).

Phytosanitary products: products used in agriculture to protect crops from pests, insects, fungi and weeds. Phytosanitary products include pesticides, insecticides, nematicides, herbicides, fungicides and rodenticides.

Rodenticides: substances that kill, repel or control rodents.

Roots and tubers: foods that grow underground and are high in carbohydrates. These are staple foods and an critical source of calories for more than 700 million poor people living in Africa, Asia and America (cassava, potato, yam, cocoyam, taro, etc.).

Rural development: all the processes and actions that contribute to improving the conditions and quality of life of communities in rural areas.

Seed: organ or part of an organ (plant) which, after being planted, can give rise to a complete plant.

Statistical data or statistics: quantified information relating to all areas of the life of the Nation and obtained by appropriate processing, using statistical methods.

Statistical information: any organised quantitative and/or qualitative information obtained from statistical data.

Statistical production: process of obtaining statistical information through the determination of needs, development of collection methodology, data collection, data entry, data processing, production of results, dissemination as well as archiving.

Threshers: agricultural machine used to thresh cereals to separate the grain from the straw and chaff (set of cereal seed envelopes).

Vegetable: cultivated plant of which, depending on the species, the leaves, roots, tubers, fruits or seeds are consumed; the consumed part of this plant.

Vegetable crops: crops grown during normal rainy seasons without irrigation or watering as in market gardening. They are sometimes associated with food crops. They are sometimes associated with food crops.

2.2.2. Development of the model of the yearbook

2.2.2.1. Development of the model of the yearbook

The structure of the model of the yearbook stems from the organic framework of the ministry, its programmes and most importantly from the analysis of its needs in terms of statistical information. As a result, the indicators identified are grouped by theme.

The model of the yearbook is presented as the final document and is subsequently completed by the data. In addition to the parts and sub-parts that have been predefined, it mainly contains tables of indicators, disaggregated as necessary and made up, as far as possible, of data series (last five years, 2016 to 2020).

2.2.2.2. Development of collection tools

By virtue of its nature as an administrative collection, this phase consisted in the preparation of the collection tools, particularly, the complete list of the administrations and institutions concerned, interview guides by type of structure, sheets and the methodology for compiling the data in order to facilitate processing. Once these collection tools had been validated, letters were sent to officials in the various administrations and institutions identified, to prepare the collection missions.

2.2.3. Data collection

Collection was carried out through the completion of a self-administered questionnaire (collection sheets), based on the use of register data, on the one hand, and a completion based on the knowledge about the environment by certain resource persons, on the other hand. It was conducted throughout the national territory, in the ten (10)

regions. In addition, focal points from the sectoral departments of the Ministry of Agriculture and Rural Development were appointed. This made it possible for the AGRISTAT design team to have all the data available at their level.

Targets were the administrations and institutions producing statistics on agricultural products and inputs, more specifically:

- administrations (the National Institute of Statistics, Ministry of Trade, General Directorate of Customs, General Directorate of the Port Authority of Douala, devolved services of the Ministry of Agriculture and Rural Development, National Observatory on Climate Change, National Office of Cocoa and Coffee, etc.);
- producer support companies (SODECOTON, SEMRY, SODECAO, MIDENO, SOWEDA, etc.);
- agricultural projects and programmes;
- large agricultural companies (HEVECAM, CDC, SOCAPALM, STE, PROLEG, MAÏSCAM, SOSUCAM, etc.), and
- agro-industries (BREWERIES, CAMLAIT, PANZANI, GUINNESS CAMEROUN SA, NESTLE CAMEROUN SA, etc.).

The data used to compile AGRISTAT come from several sources, namely:

- collection of data from administrative sources, conducted in 2020 throughout the national territory, in the central and devolved services of the Department of Agriculture Surveys and Statistics and agricultural enterprises. The data were collected by the staff of the Department of Agriculture Surveys and Statistics, on the one hand, and a good number of staff of the devolved services (Heads of Regional Services of Agriculture Surveys and Statistics) of the Ministry of Agriculture and Rural Development, on the other hand;
- reports and databases of surveys conducted by the Ministry of Agriculture and Rural Development and all the administrations mentioned above. These include, among others, CSFVA surveys, Harmonised Framework, National Accounts, RASIPEFIN, etc.

2.2.4. Organisation of collection

Mission teams were set up and went down to the different regions with a view to collecting or, where appropriate, submitting interview guides and sheets so that they can be filled in and then returned to the Department of Agriculture Surveys and Statistics.

These field visits were conducted under the supervision of the Heads of Regional Services of Agriculture Surveys and Statistics of each region, after a work session to harmonise the understanding of the concepts and definitions used in the interview guides. The Heads of Regional Services of Agriculture Surveys and Statistics also provided certain information available at their level.

In the central services of the Ministry of Agriculture and Rural Development, focal points were appointed for all of technical departments of the ministry, to centralise and make available data from their departments to the teams in charge of compiling AGRISTAT data.

In addition, a general supervision team for the operation were set up at the central level at the Department of Agriculture Surveys and Statistics, to guarantee the production of results within the required time frames. This team was responsible for following up with the relevant administrations and institutions, whose information was slow to reach the teams in charge of compiling the data at the central level.

2.2.5. Data operation and processing

At the end of collection, all the information collected was analysed, entered, codified and cleared by a multidisciplinary team set up at the Department of Agriculture Surveys and Statistics for the production of AGRISTAT.

Operation of the available data consisted in calculating the requested indicators and producing the tables contained in the yearbook model. For most of the tables, the indicators were disaggregated by region and by sector of activity. Some tables were transformed into figures to make them easier to read, especially when the information was only available at the national level.

2.2.6. Drafting of the statistical yearbook

At the end of clearance, all the field information from both sources was processed and compiled by the multidisciplinary team set up at the Department of Agriculture Surveys and Statistics. Their synthesis and analysis made it possible to produce tables of results.

The various tables and results produced were reviewed, finalised and validated at the various validation meetings involving all stakeholders, especially the data producers, development team at the Department of Agriculture Surveys and Statistics, devolved services of the Ministry of Agriculture and Rural Development, as well as experts with proven skills in the field.

The resulting document was subsequently examined at a working session that brought together the various focal points of the departments of the Ministry of Agriculture and Rural Development and the Department of Agriculture Surveys and Statistics. The document was subsequently validated after the drafting team took into account the recommendations made at the said session.

2.2.7. Editing and dissemination

Before reprography, the document was submitted to a team for proofreading. It was subsequently submitted to the relevant service for editing before dissemination, based on a mailing list that was drawn in collaboration with the team that developed the yearbook. In addition to the mailing list, copies were made available to users for on-site consultation. The electronic version of the document was, however, uploaded at "www.minader.cm" even before its reproduction. Finally, this publication was also disseminated through dissemination seminars and workshops.

2.2.8. Yearbook limitations

Some limitations can, however, be noted in the context of the development of this AGRISTAT, namely:

- a significant proportion of the enterprises that were contacted did not submit data forms;
- the break in the production of the statistical yearbook during the period from 2011 to 2021;
- the absence of an Annual Agricultural Survey since 2010;
- the unavailability of certain data in the expected format;
- the insufficiency of financial resources, which did not make it possible to take charge of the critical segments (staff of the devolved services of the Ministry of Agriculture and Rural Development) in the development of AGRISTAT, such as the Heads of the Regional Services of Agriculture Surveys and Statistics and Heads of Divisional Sections of Agriculture Surveys and Statistics;
- non-harmonisation of data collection methodologies at the devolved level.

2.2.9. Relevance and use of the statistical yearbook

The AGRISTAT statistical yearbook is the statistical memories of the Ministry of Agriculture and Rural Development. It is the annual summary document of agricultural statistics and provides information on trends in the main indicators

of the agriculture and rural development sub-sector, over several years. Regular monitoring of changes in these statistics is the best way to determine the impact of the State's multifaceted support on the primary sector. It is used to compare and analyse situations and is a critical tool for fact-based decision-making.

As such, AGRISTAT is a product of the Ministry of Agriculture and Rural Development which should ensure visibility of the performance of the actions carried out by the ministry in the sector. It is a working document for users.

For the ministry, it will make it possible to prepare the Medium-Term Expenditure Frameworks (MTEFs) through planning, programming, budgeting and monitoring-evaluation. For other users, such as public and private administrations, regional and international organisations, researchers, civil society and others, its content will make it possible for studies and research to be conducted in the agriculture and rural development sub-sector.

3. FOCUS ON SOME PERFORMANCE INDICATORS

This section reports on a set of indicators on the trends in production volumes and traded volumes of some of the main industrial and export crops in Cameroon, as well as the traded volumes of some goods from agricultural products and inputs.

TABLE 1: Some performance indicators

Indicators	2016	2017	2018	2019	2020
Growth rate of the cocoa, coffee, tea and sugar industries (in %)	10.0	23.2	1.0	4.9	-2.4
Growth rate of cereal-based product manufacturing industries (in %)	1.5	3.7	2.2	5.1	9.3
Growth rate of rubber production industries and manufacture of rubber items (in %)	0.3	0.5	-2.4	-1.5	-7.6
Growth rate of trade margins for agricultural products (in %)	4.3	3.1	4.3	4.4	0.2
Growth rate of trade margins for cocoa, coffee, tea and sugar products (in %)	10.7	18.5	0.8	3.2	-3.7
Trends in exports as a volume of goods of agricultural products (%)	9.1	-5.9	1.3	1.6	-8.0
Trends in exports as a volume of goods of agri-food industry products	121.8	10.4	6.1	-12.2	-3.3
Trends in imports as a volume of goods of agricultural products (%)	2.9	12.3	4.3	7.6	-6.8
Trends in imports as a volume of goods of agri-food industry products (%)	1.8	5.0	-2.8	8.4	-5.8
Trends in imports as a volume of fertiliser goods (in thousand tons)	... ¹	203.4	209.8
Trends in imports as a volume of insecticide; fungicide; herbicide goods, etc. (in thousand tons)	19.3	26.3
Trends in imports of agricultural products (%)	2.9	14.9	-5.4	15.6	...

CHAPTER 2: PRODUCTION AND PRODUCTIVITY OF AGRICULTURAL SECTORS

This chapter reports on trends in the annual production of the priority vegetable sectors.

More specifically, it provides information on:

- trends in production and productivity of cereal sectors;
- trends in production and productivity of roots and tubers, fruits and derived products;
- trends in production and productivity of industrial sectors;
- trends in production and productivity of other sectors;
- the structuring and building of stakeholders technical capacities;
- control of quality of products and support for agricultural inputs
- the promotion of medium and large farms.

Technical note:

In general, statistics on production and productivity provided in this chapter are those capitalised at the end of each year and are based on information available at the Regional Delegations of Agriculture and Rural Development (DRADER), and Divisional Delegations of Agriculture and Rural Development (DDADER).

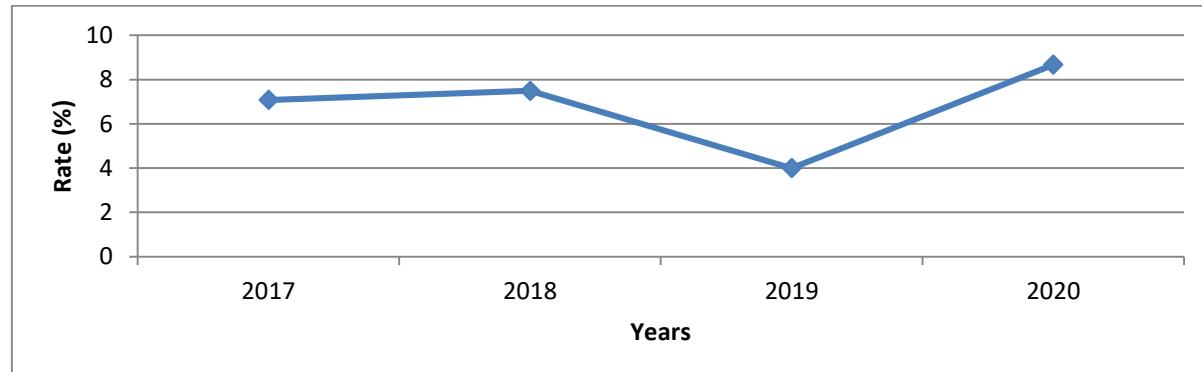

In addition, the sectors considered are the priority sectors in keeping with memo No. 01024/MINADER/SG/DEPC/CAPPA of 18 April 2019 on the priority sectors to be developed by the Ministry of Agriculture and Rural Development. These are: rice, maize, sorghum, cassava, potato, cocoa, coffee, cotton, palm oil, plantain, pineapple and cashew. However, a few sectors were added according to the various groups.

For any further information, please contact the sources of the tables/figures.

1. FOCUS ON THE MAIN PERFORMANCE INDICATOR OF THE CHAPTER

This part provides information on the main indicator of this chapter. This is the annual growth rate of national production volumes for all the identified priority sectors.

FIGURE 1: Trends in the annual growth rate of national production volumes for priority sectors (%)

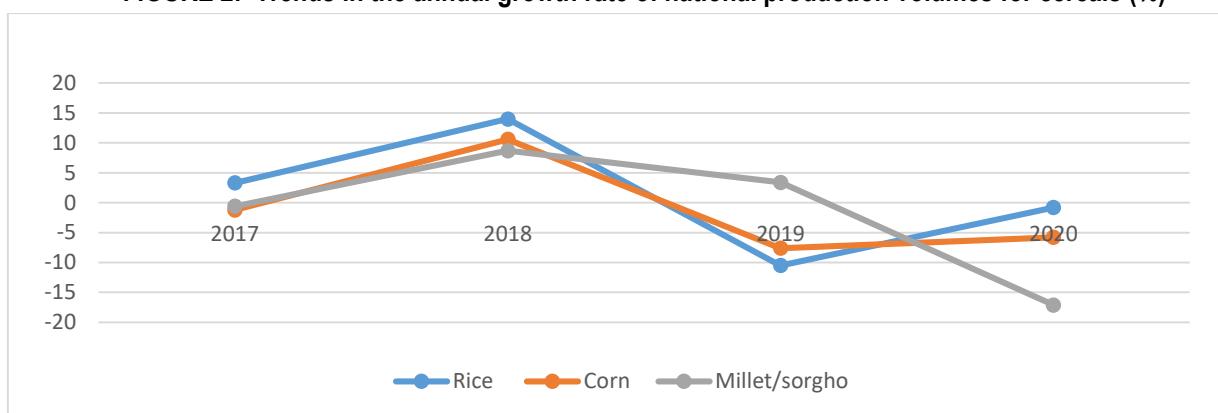

Source: MINADER (Annual Performance Reports)

Note: The exact values of this indicator may be found in appendix 20

2. PRODUCTION AND PRODUCTIVITY OF CEREALS

Information relating to trends in the production and productivity of the priority cereal sectors, namely rice, maize and millet/sorghum, is provided in this section.

FIGURE 2: Trends in the annual growth rate of national production volumes for cereals (%)

2.2. CEREAL PRODUCTIVITY

Productivity was calculated by relating the quantity produced to the surface area cultivated and not the quantity harvested (as a result of the unavailability of the surface areas harvested by speculation). With regard to overall

³ n.a.: Not applicable

⁴ e: Estimate and evaluation

productivity, calculation was made by relating the national production for the year to the national surface area for the same year. It should be noted that cereal yields in the Adamawa region may contain a certain margin of error, as a result of the consideration of these cultivated surface areas. The insecurity of the populations, due to the presence of highway robbers, has led to the abandonment of agricultural products in farms. Thus, productivity of these speculations is underestimated.

3. PRODUCTION AND PRODUCTIVITY OF ROOTS AND TUBERS, FRUITS AND DERIVED PRODUCTS

This section provides information relating to trends in the production and productivity of the priority root and tuber and fruit sectors, particularly, cassava, potato, and pineapple (in keeping with No. memo 01024 MINADER/SG/DEPC/CAPPA of 18 April 2019 on the priority sectors to be developed by the Ministry of Agriculture and Rural development). It also provides information relating to trends in the production and productivity of cocoyam/taro, yam, sweet potato and watermelon.

3.1. PRODUCTION OF ROOTS AND TUBERS AND FRUITS

Information relating to trends in the production of the priority root and tuber and fruit sectors is provided below: It should be noted that, with regard to fruits, only information relating to pineapple and watermelon is provided in this document due to the unavailability of data on the other fruits.

3.2. PRODUCTIVITY OF ROOTS AND TUBERS, AND FRUITS

This part provides information on trends in the productivity of roots and tubers, and fruits.

3.2.1. Productivity of roots and tubers

This section reports on information relating to trends in the productivity of roots and tubers. Productivity was calculated by relating the quantity produced to the surface area cultivated and not the quantity harvested (as a result of the unavailability of the surface areas harvested by speculation). With regard to overall productivity, calculation was made by relating the national production for the year to the national surface area for the same year.

3.2.2. PINEAPPLE AND WATERMELON PRODUCTIVITY

This part provides information on trends in the productivity of fruits. Productivity was calculated by relating the quantity produced to the surface area cultivated and not the quantity harvested (as a result of the unavailability of the surface areas harvested by speculation). With regard to overall productivity, calculation was made by relating the national production for the year to the national surface area for the same year.

4.3. PRODUCTION OF MAIN EXPORT/IMPORT CROPS (ENTERPRISES) (TONS)

This section is aimed at reporting on enterprise productions by sector and derived products. The main export/import sectors discussed here are: cotton, sugar cane, oil palm, paddy rice, sweet banana and cocoa.

TABLE 41: Volume of cotton derived products of the main agricultural enterprises in Cameroon

Products	2016	2017	2018	2019	2020
Quantity of refined oil produced (in Litre)	6,815,730	8,331,750	10,686,555	10,264,665	...
Quantity of oilseed cake (in tons)	28,909,980	30,501,960	38,890,440	37,639,440	...

5. PRODUCTION AND PRODUCTIVITY OF OTHER SECTORS

This part provides information relating to trends in the production and productivity of the other sectors. The sectors were divided into three groups: the other industrial sectors (rubber), legumes (soybean, groundnut, cowpea, beans, sesame, bambara groundnut) and market gardeners (tomato and onion).

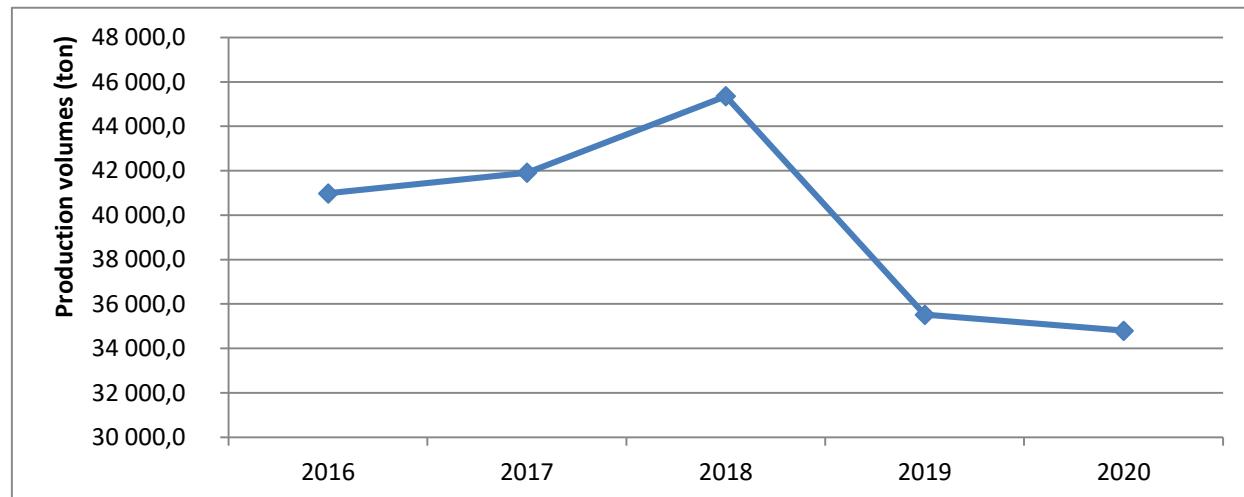

5.1. PRODUCTION OF OTHER SECTORS

This section provides information on trends in the production of the other sectors.

5.1.1. Production of other industrial sectors

This section reports on trends in the production volume of rubber.

FIGURE 14: Annual trends in national rubber production volumes (tons)

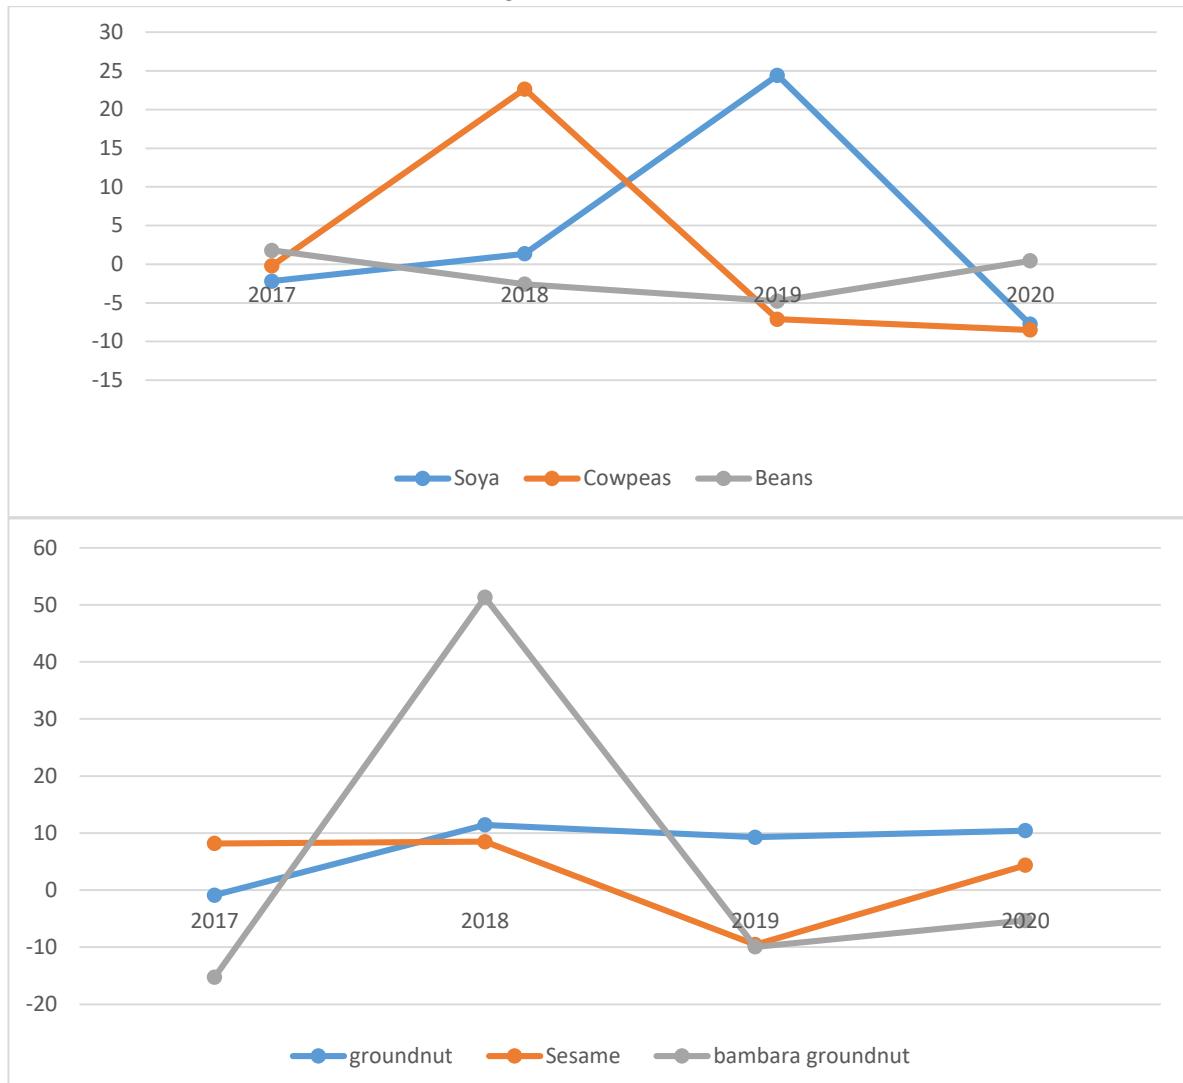

Source: MINADER, RASIPEFIN 2021

Note: Exact values of national rubber production volumes are provided in appendix 22.

5.1.2. PULSE PRODUCTION

Information on changes on pulse production is provided below. For the sake of visibility, the figure on trends in the annual average growth rates will be split into two.

FIGURE 15: Trends in the annual growth rate of national production volumes for pulses (%)

5.2. PRODUCTIVITY OF OTHER SECTORS

5.2.1. PRODUCTIVITY OF PULSES

This section reports on trends in the productivity of pulses. Productivity was calculated by relating the quantity produced to the surface area cultivated and not the quantity harvested (as a result of the unavailability of the surface

³⁶ e : Estimate and evaluation

³⁷ n.a.: Not applicable

areas harvested by speculation). With regard to overall productivity, calculation was made by relating the national production for the year to the national surface area for the same year.

5.2.2. Productivity of market-garden crops

The section reports on trends in the productivity of market-garden crops. Productivity was calculated by relating the quantity produced to the surface area cultivated and not the quantity harvested (as a result of the unavailability of the surface areas harvested by speculation).

Grand total	1,017	2,317	640	2	5	3,981

Source: DDLC/MINADER

Note: These are Agropastoral Producer Organisations working only in the above-mentioned branches of activity. A more detailed table is provided in Appendix 7

6.2. TRAINING UNDER THE TRAINING SYSTEM OF THE MINISTRY OF AGRICULTURE AND RURAL DEVELOPMENT

This section reports on trends in the number of graduate learners from training institutions under the training system, on the one hand, and the number of training establishments under the training system of the Ministry of Agriculture and Rural Development, on the other hand. It also reports on the proportions of producers using modern agricultural production techniques. Appendices 16, 17, 18 and 19 provide more details on this part.

Technical note:

It should be noted that the “SAT” training course includes three majors, namely agropastoral advisers, agropastoral entrepreneurs and management of cooperative enterprises. In addition, the first agreements in the Centre region were signed with the schools in 2018 and the first batches obtained as from 2020.

CHAPTER 3: INFRASTRUCTURAL ENVIRONMENT AND ACCESS TO FACTORS OF PRODUCTION AND MARKETS

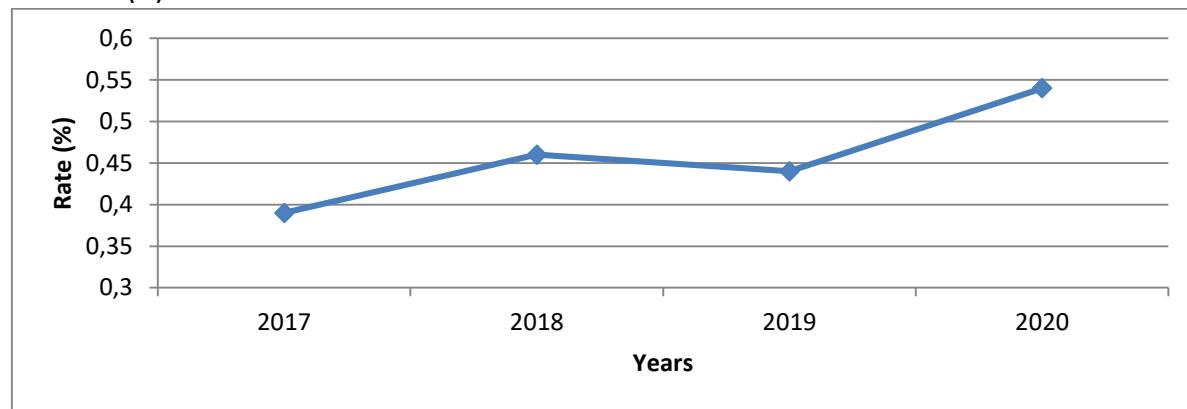

This chapter reports on trends in the level of access to production infrastructure and agricultural equipment in rural areas in recent years.

More specifically, it provides information on:

- availability of agricultural production equipment and materials;
- availability to socio-economic and community infrastructure in rural areas;
- servicing and sustainable harnessing of the potential of developable and irrigable land in Cameroon;
- accessibility to agricultural financing by producers.

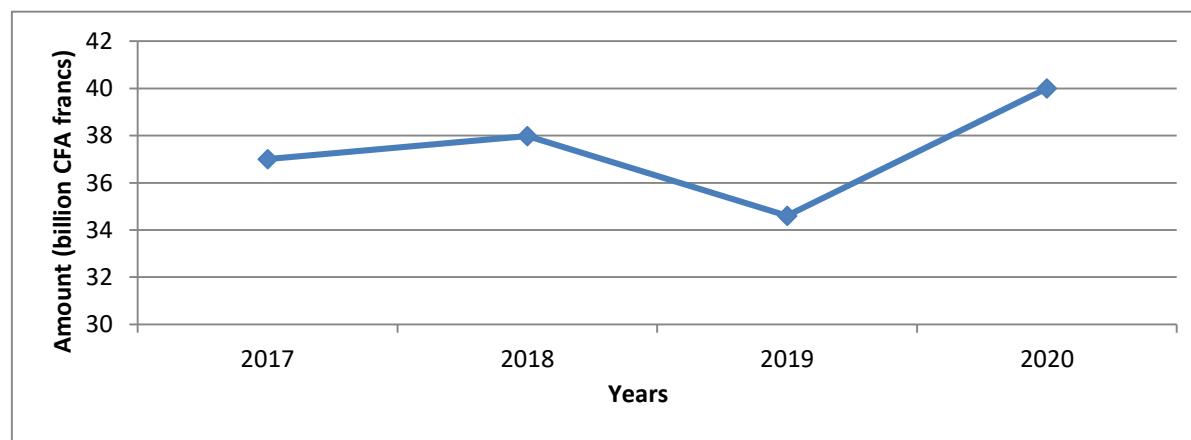

1. FOCUS ON THE MAIN INDICATORS OF THE CHAPTER

FIGURE 21: Annual trends in the number of tillers and tractors per 1,000 hectares in Cameroon (%)

CHAPTER 4: RESILIENCE OF AGRICULTURAL PRODUCTION, FOOD AND NUTRITIONAL SECURITY SYSTEMS OF RURAL POPULATIONS IN THE FACE OF CLIMATE CHANGE

This chapter reports on trends in the prevalence of food insecurity, trends in climatological parameters, as well as exposure to natural disasters.

More specifically, it provides useful information for:

- strengthening and scaling up climate change adaptation and mitigation measures;
- strengthening the food and nutritional security of vulnerable populations;
- accessibility to agricultural products (prices);
- restoring and securing land resources;

1. STRENGTHENING AND SCALING UP CLIMATE CHANGE ADAPTATION AND MITIGATION MEASURES

Technical note:

The study of the monthly trends in rainfall (height and number of rainy days) and temperature (°C) will promote initiatives aimed at adapting and mitigating climate change.

Hist Val: Historical Value

Note: Rainfall intensity is the volume of rainfall recorded per unit of time and per surface area unit. It accounts for the relationship between the height of rainfall and the number of rainy days. The intensity difference refers to the difference between the rainfall intensity for the year 2019 and the historical value of the rainfall intensity (1979 to 2018).

FIGURE 32: Distribution of rainfall (mm) in Cameroon in 2019

Source: National Observatory on Climate Change (Climate Outlook for 2019)

Average Hist. Value: Average Historical Value between 1979 and 2018

Note: The difference in the height of rainfall is the difference between the height of rainfall in 2019 and the historical value of the height of rainfall (1979 to 2018) rounded. For further information, please contact the source (National Observatory on Climate Change).

2. STRENGTHENING THE FOOD AND NUTRITIONAL SECURITY OF VULNERABLE POPULATIONS

2.1. PREVALENCE OF FOOD INSECURITY

As defined by the SDGs, the Food Insecurity Prevalence Rate measures the percentage of individuals in the population who experienced moderate or severe food insecurity during the reference period.

Regarding the calculation method or any other technical information, please contact the source National Food Security Monitoring and Strengthening Project (Harmonised Framework).

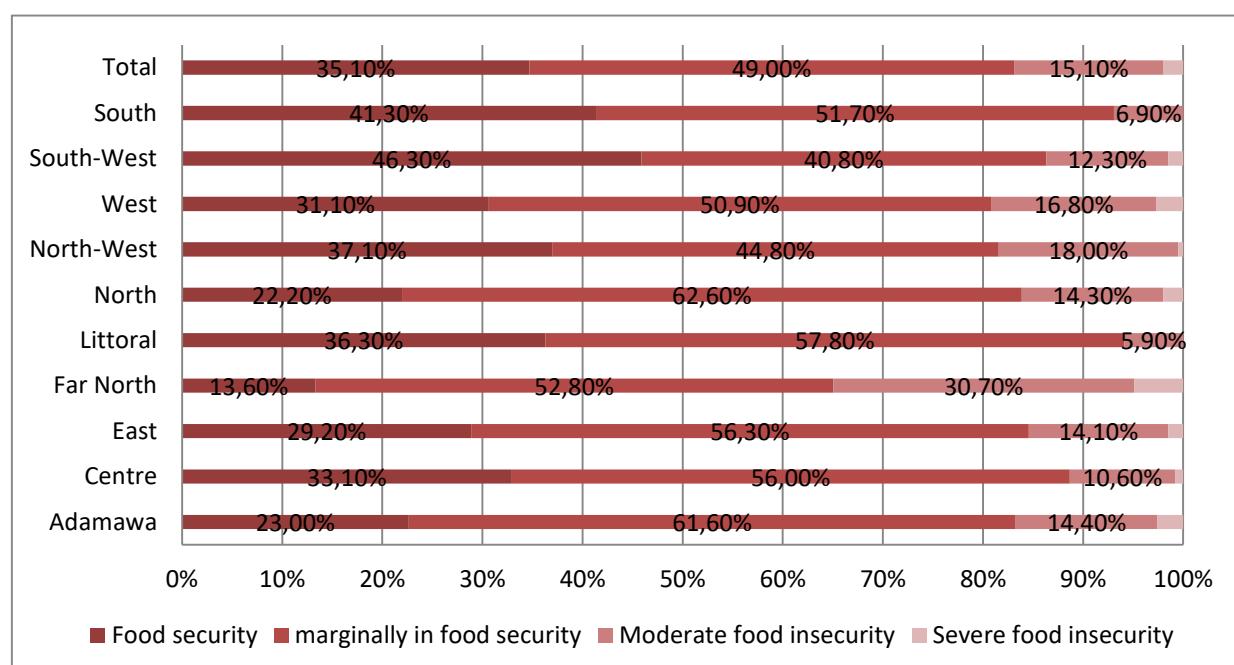

FIGURE 33: Trends in the percentage (%) of the national population affected by food insecurity (2017 à 2020)

Source: MINADER (Annual Performance Reports)

Note: The exact values for this indicator may be found in appendix 21.

FIGURE 34: Percentage of households by food security status in 2017(%)

Source: MINADER, WFP, Crop and Food Supply Assessment Mission 2017 Final report

139: Description of the different phases in the analysis on the prevalence of food insecurity

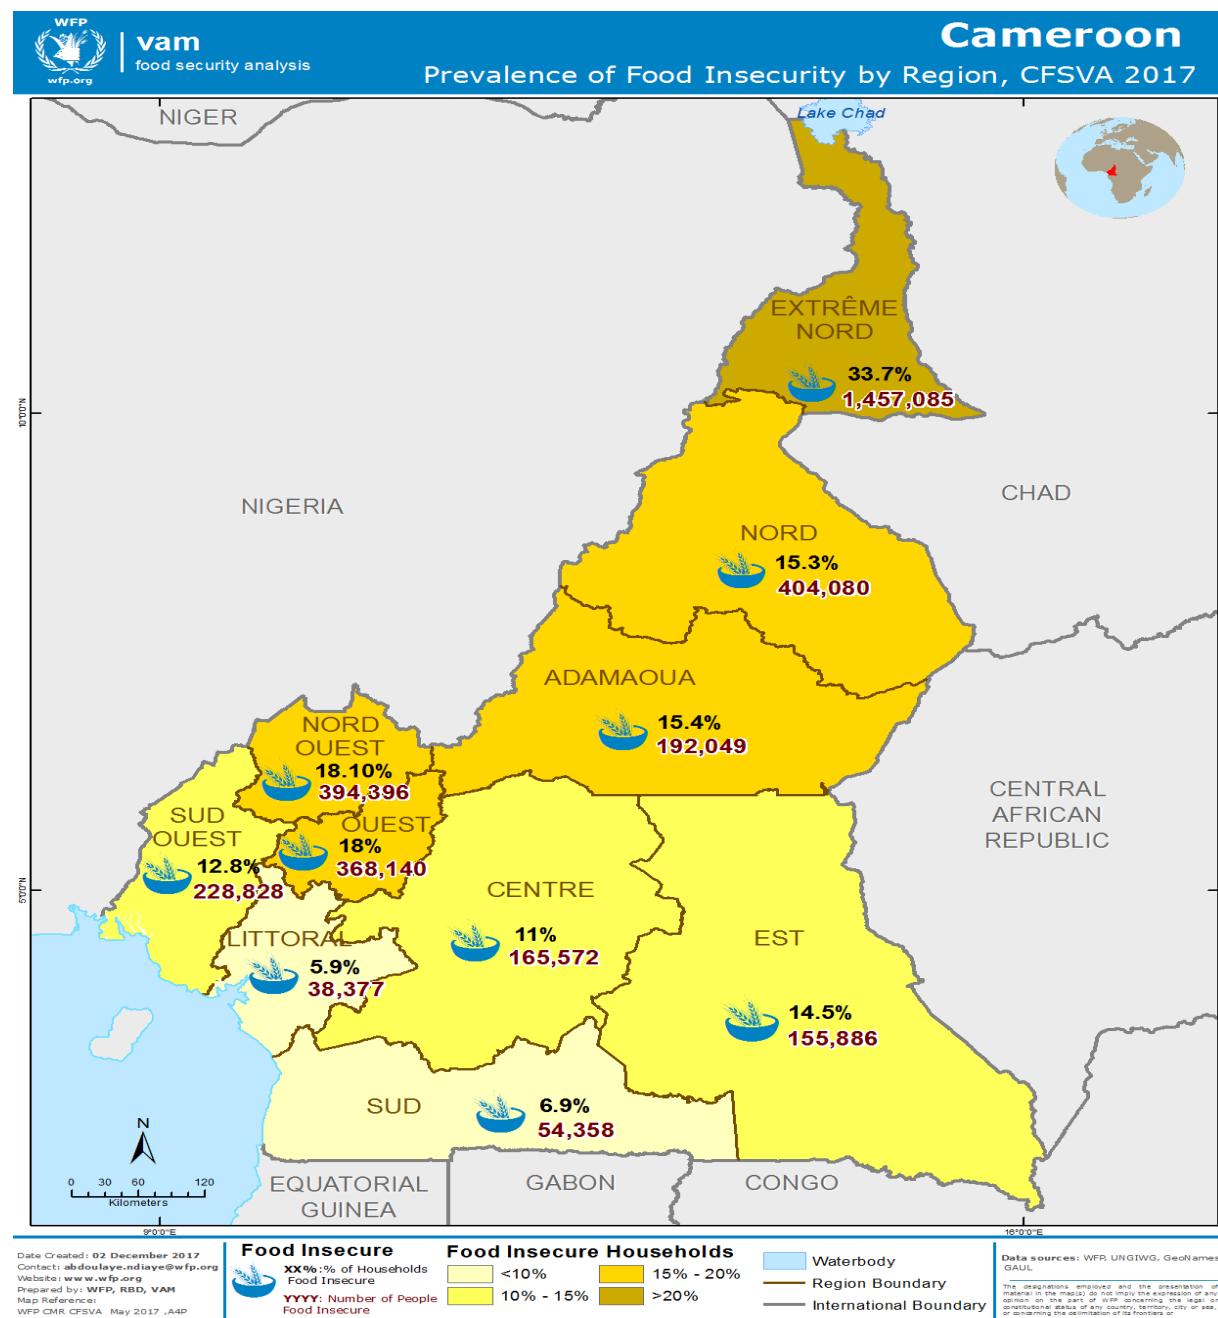

Phase names	Phase 1 None/Minimal	Phase 2 Under pressure	Phase 3 Crisis	Phase 4 Emergency	Phase 5 Disaster/Famine
Description phases	of Households are able to meet their basic food and non-food needs without engaging in atypical or unsustainable strategies to access food and income.	Households have adequate minimum food consumption but cannot afford certain non-food expenditure without engaging in stress coping strategies.	Households: have deficits in food consumption reflected by acute malnutrition that is high or above usual levels, Or Manage to meet basic food needs marginally but only by disposing of their major livelihood assets or employing crisis coping strategies.	Households: have significant food consumption deficits reflected in very high acute malnutrition and excess mortality, Or Are able to reduce significant food deficits but only by using emergency coping strategies and liquidating their assets.	Households are in dire need of food and/or what is needed to meet their other basic needs despite maximum use of coping strategies. Critical levels of starvation, death, deprivation and acute malnutrition are evident. (For Famine phase classification, the area must have extremely critical levels of acute malnutrition and mortality)
Priority intervention objectives	Action required to build resilience and reduce disaster risk.	Action required to reduce disaster risk and protect livelihoods.	Protecting livelihoods, preventing malnutrition and deaths.	Saving lives and livelihoods.	Prevent large-scale deaths and avoid total collapse of livelihoods.
Food consumption	HDDS>=5 group ASC: Acceptable and stable consumption HHS: nil Score = 0 rCSI: 0 - 3 HEA ⁹ : DPME = 0%	HDDS: 4 groups ASC: Consumption acceptable but deteriorating HHS: low Score = 1 rCSI: 4 - 18 HEA : DPME < 80%	HDDS: 3 groups ASC: Protecting livelihoods, preventing malnutrition and deaths. HHS: moderate Score = 2 - 3	HDDS: 2 groups ASC: Saving lives and livelihoods. HHS: severe Score = 4 rCSI: 0 - 3 ≥ 19 HEA : DPME ≥ 20% or DS < 50%	HDDS: 0 – 1 group ASC: Preventing large-scale deaths and avoiding total collapse of livelihoods. HHS: very severe Score = 5 - 6 rCSI: 0 - 3 ≥ 19 HEA ⁹ : DS: 50%

Phase names	Phase 1 None/Minimal	Phase 2 Under pressure	Phase 3 Crisis	Phase 4 Emergency	Phase 5 Disaster/Famine
Trends in livelihoods	At least 80% of households have not implemented any negative coping strategies.	At least 20% of households have implemented stress or worse coping strategies and less than 20% have implemented crisis or emergency coping strategies	At least 20% of households have implemented crisis or worse coping strategies and less than 20% have implemented emergency coping strategies	At least 20% of households have implemented emergency coping strategies	ND
Nutritional status	Global acute malnutrition: < 5%	Global acute malnutrition: 5-10%	Global acute malnutrition: 10-15%	Global acute malnutrition: 5-30%	Global acute malnutrition: ≥30%
	BMI prevalence < 18.5 kg/m ² : < 5%	BMI prevalence < 18.5 kg/m ² : 5-9.9%	BMI prevalence < 18.5 kg/m ² : 10-19.9%	BMI prevalence < 18.5 kg/m ² : 20-39.9%	BMI prevalence < 18.5 kg/m ² : ≥40%

3. ACCESSIBILITY TO AGRICULTURAL PRODUCTS

This section reports, on the basis of available data, on trends in prices of the main agricultural crops in the regions of Cameroon.

Technical note:

Prices presented in this part are the prices on the agricultural markets collected from the Divisional Delegations of the Ministry of Agriculture and Rural Development for the years 2018 and 2019. For further information on these prices, please contact the source. The Average Annual Price (AAP) represents the simple arithmetic mean of the monthly prices.

CHAPTER 5: CONTRIBUTION OF AGRICULTURE TO THE NATIONAL ECONOMY

Given that agriculture is a major sector of activity when analysing the structure of the Cameroonian economy, its real contribution to the national economy should be considered.

This will be done specifically through the highlighting of:

- contribution of the agriculture sub-sector to the economy;
- review of trade in agricultural products;
- analysis of the financing of agricultural activity in Cameroon.

Technical note:

The tables below are completed at the national level. For further information, please contact the sources of each table.

1. CONTRIBUTION OF THE AGRICULTURE SUB-SECTOR TO THE ECONOMY

TABLE 161: Annual growth rate of GDP in the primary sector and by branches of the sector (%)

Branches	2016	2017	2018	2019	2020
Food product agriculture	... ⁹⁴	4.6	3.5	2.6	2.4
Industrial and export agriculture	...	-4.7	2.5	5.0	-1.6
Animal production and hunting	4.4	3.6	3.8	2.5	5.4
Fishing and fish farming	4.2	5.8	6.1	-1.8	-2.5
Sylviculture and logging	4.0	3.2	2.1	1.1	7.6
Primary sector	2.5	2.5	3.8	3.9	0.6
GDP	4.5	3.5	4.0	3.5	0.5

APPENDICES

TABLE 173: Appendix 1: Agro-climatic zones of Cameroon in 2017

Zone forestière mono-modaleSuperficie : 45 658 km²

Pluviométrie : 2 500 à 4 000 mm/an, régime monomodal

Sols : pentes volcaniques, sédiments d'origine rocheuse le long de la côte

Cultures : cacao, banane, plantain, huile de palme, gingembre, poivre

Zone forestière bi-modaleSuperficie : 165 770 km²

Pluviométrie : 1 500 à 2 000 mm/an, 2 saisons humides distinctes

Sols : ferrallitiques, acides, argileux, faible capacité de rétention des éléments nutritifs

Cultures : cacao, manioc, maïs, huile de palme, ananas

Zone des hauts plateauxSuperficie : 31 192 km²

Pluviométrie : 1 500 à 2 000 mm/an, 180 jrs de pluie

Sols: très fertiles et propices aux activités agricoles,
jeunes sur fortes pentes, lessivés dans les vieux plateaux,
horizon B d'illuviation dans dépressions fermées,
plateaux enrichis en matériaux volcaniques

Cultures : cacao, café, maïs, haricot sec, pomme de terre, maraîchage

Zone des hautes savanesSuperficie : 123 077 km²

Pluviométrie : 1 500 mm/an, 150 jrs de pluie

Sols : perméables, capacité de rétention d'eau moyenne,
sols ferrallitiques bruns ou rouges et sols hydromorphes

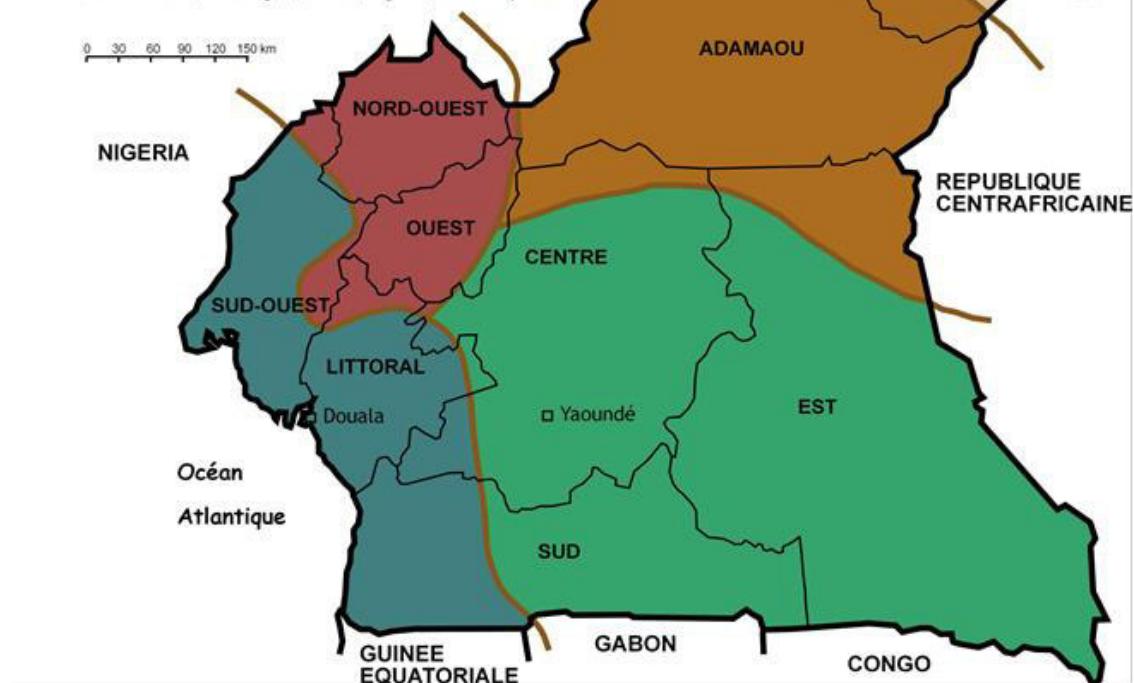

Cultures : mil-sorgho, maïs, igname, pomme de terre

Zone soudano-sahélienneSuperficie : 100 353 km²

Pluviométrie : 400 à 1 200 mm/an

Sols : grande diversité : ferrugineux, lessivés,
hydromorphes, alluvionaires, lithosols, vertisol etc.

Cultures : coton, mil-sorgho, niébé, oignon, sésame
